CYBERSHIELD

A-HUNT®
Active Cyber Hunt Services

Today's stealthy cyber threats will intrude your networks inadvertently and can remain undetected for years.

Critical network prophylaxis has proven to be the most efficient, preventive approach to protecting your critical data in a world where most cyber defense capabilities depend on passive measures.
A-HUNT is an advanced cyber-hygiene method that flushes your systems without compromising performance and integrity of your networks and data.

Our active cyber hunt services contain the ability to detect, identify, neutralize and hack-back threats, and are the strategic cylinders of our service, that provide our customers the confidence that systems and networks are at minimal risk of being attacked even if they have been compromised.
